Part 1: News and Infos

1. 5 MHz flooded by fishermen

EI3GYB (Michael) found many fishermen on 5 MHz:

Frequencies so far:

5362.5;5400;5345.2;5360;5280;5327 KHz- all USB.

5 Mhz is legal for HAMs in Ireland,UK and other countries for a long time already. We have a number of spot frequencies we can use as secondary user. And I keep meeting the fishermen on some of these. The situation on 5 MHz is ideal for the fishermen. Many countries have different allocations for HAMs. On top of this the new 5 MHz band was already opened up in some countries as well. The band is cut into many small segments used by different countries. So the fishermen can hide among the crowd.They do not stick out.

As soo as a DX station or some rare country comes up on 5 MHz, all rules are forgotten by HAMs and everybody just follows the crowd, regardless of legality. Just watch what is going on with CY9C at the moment.As soon as they are on 5 MHz, the chaos unfolds.Allocations are forgotten by a big part of the HAM community.

The comment of G3PSM (Colin):

By official I mean the Radio Regulations which come in effect on the 1st January 2017. All other allocations are under Radio Regulation 4.4 which allows any administration to allocate a frequency to any service on the basis on non-interference.

Wolf's comment: I tried to find fishery traffic there on Aug.25th, but no success here in DL. There is no entry about legal commercial fishery frequencies in my tables between 5000 and 5800 kHz. But I found another intruder:

A fellow transmitting on AM with a very unstable carrier same as on the CW range of 80 m. Possibly coming from CIS.

2. PRC4+4 from China:

We found the Chinese system PRC4+4 on 10, 14 and 21 MHz. Take note: Traffic on 10 MHz legal !

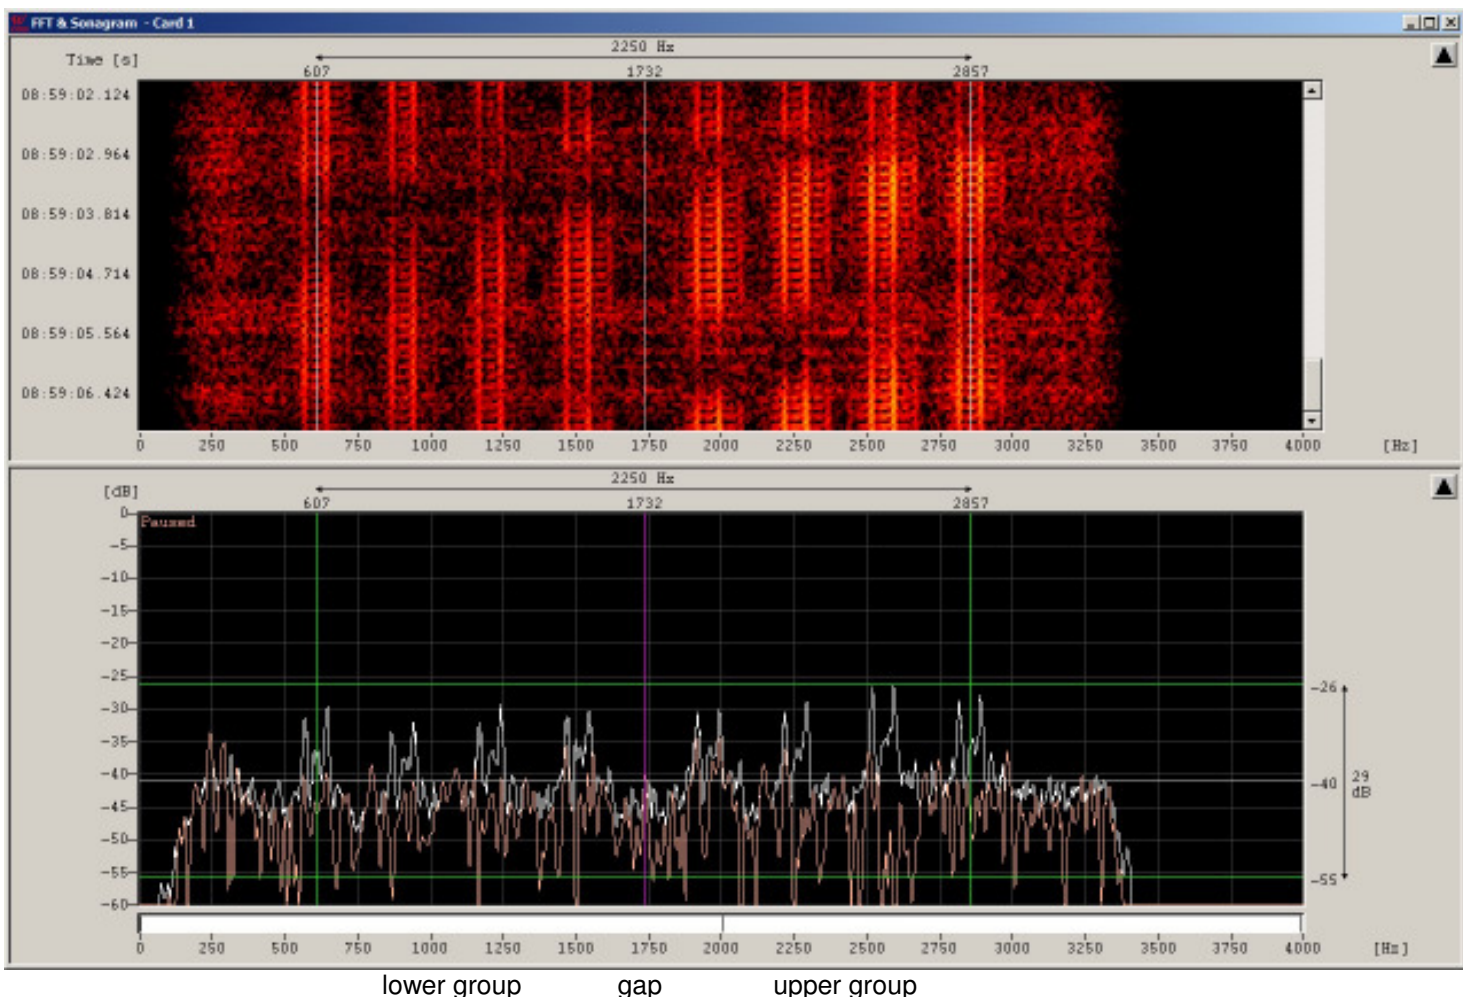

Parameters: Traffic 8 x 75 Bd PSK4A or PSK4B, bandwidth 2250 Hz.Transmission of 4 letter or 4 figure groups.

Idents and confirmation traffic are in plain text. Idle condition 8 x FSK 150 Bd The system seems to run very stable. Even CW signals from amateurs are not showing any influence. W-Code can decode PRC4+4.

Sonagram and FFT: PRC4+4 in idle condition 8 x FSK 150 Bd (**DK2OM with Wavecom W-Code**)

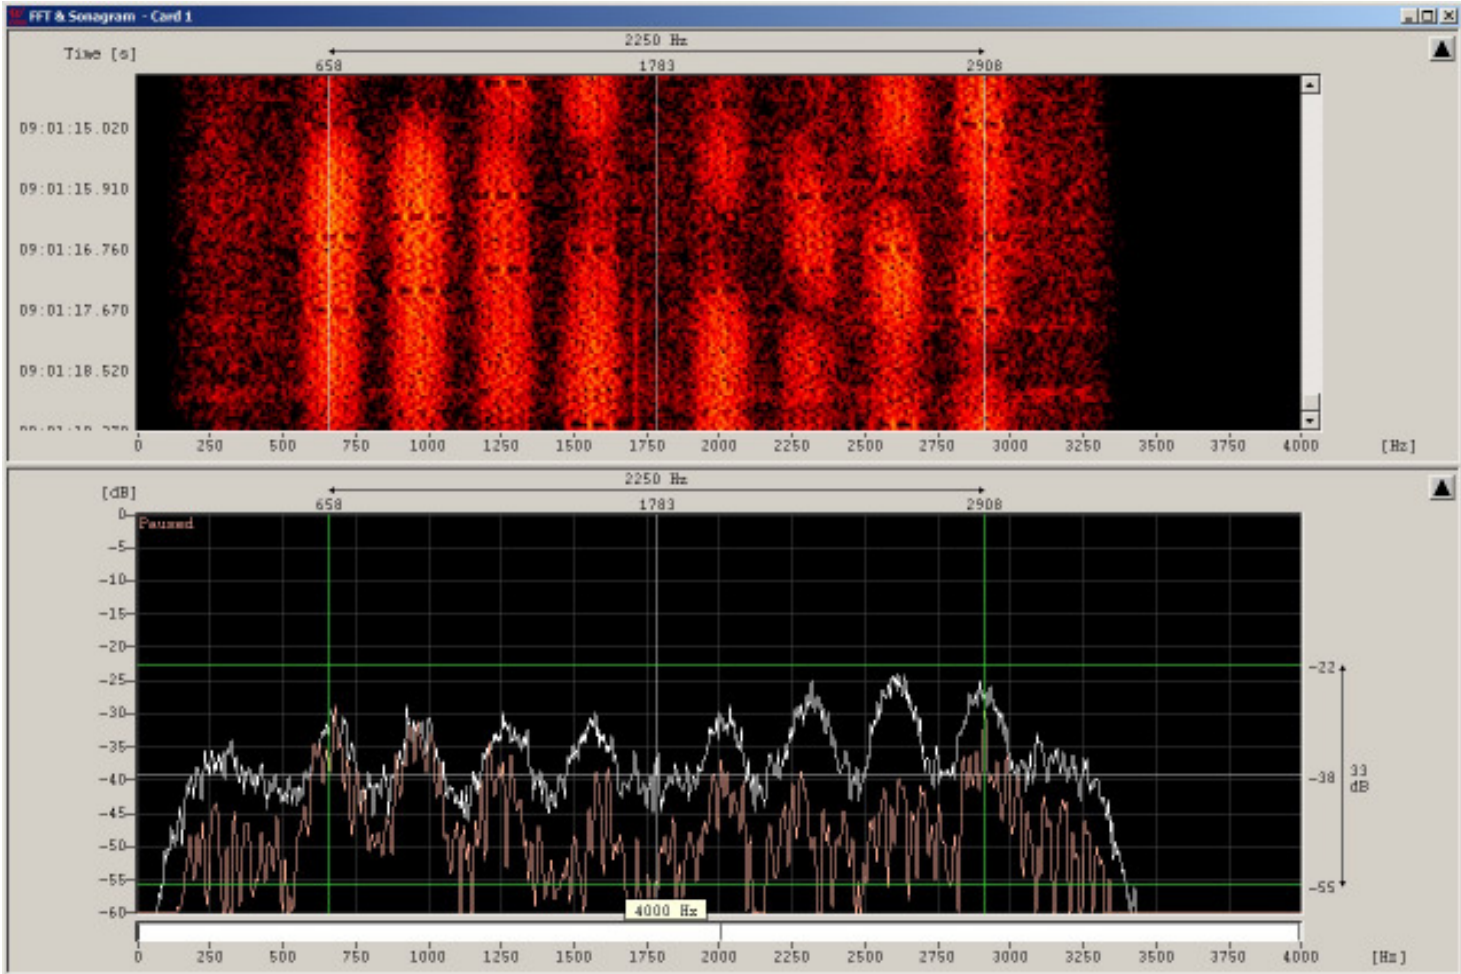

You can see a gap between the upper and the lower group.

PRC4+4 in traffic condition – sonogram and FFT (DK2OM with Wavcom W-Code):
You can see a gap between the upper and the lower group.

3. Russian Radar Contayner on 7 and 14 MHz

Rhe Russian radar Contayner was again active with long lasting transmissions on 7 and 14 MHz, often with many spurious emissions

4. Spanish fishermen on 80 m with voice scrambler

Spanish fishermen were abusing 3510 and 3590 kHz USB with the voice scrambler “CRY 2001”. This scrambler is using a FSK synchro signal, which is audible during every microphone change. The FSK bursts works with 100 Bd and 170 Hz shift.

5. Radar Iran on 28960 kHz daily – no change

The Iranian radar was daily transmitting 28960 kHz on FMOP with 150 and 313 sps covering about 50 kHz. Many spurious emissions.

6. No changes

3590.0 kHz – USB – Spanish fishery with voice scrambler “CRY 2001” every evening
6998.0 kHz - Russian buzzer – daily and all day
7120.0 kHz – Radio Hargaysa Somalia
7205.0 kHz – RFI = Radio France International) splattering down to 7185 kHz every evening
14295.0 kHz Radio Tajik (harmonic from 4765 kHz)

ARSK MONITORING OVERVIEW FOR AUGUST 2016

Radio Hargeisha remained on 7,120 kHz with broadcasts. As usual there were some local or Central African intruders observed on 7,000, 7,074 and 7,075 kHz.
